

Brasco's Aero Shelter with Clear Twinwall Polycarbonate Roof Glazing

# POLYCARBONATE

## Long-Lasting Roof Glazing Option

Brasco offers a variety of glazing options for shelter roofs. The most common and long-lasting options include twinwall polycarbonate and monolithic polycarbonate panels because they are virtually unbreakable and able to withstand impacts greater than glass and acrylic.

Consult with your Brasco account manager for guidance on the best suited option for your shelter type and location. Custom colors are available upon request, as well as samples.

### **Twinwall Polycarbonate**

85% light transmission. Provides thermal insulation for colder regions. Light in weight.

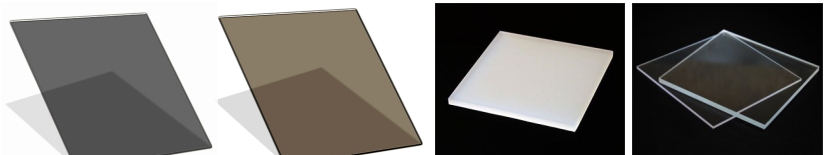

T3—Bronze

T2—Clear

T1—White

### **Monolithic Polycarbonate**

75% light transmission. Heavier in weight than Twinwall Polycarbonate.

M4—Gray

M3—Bronze

M2—White (Opaque)

M1—Clear
